

BB00.40-P-0224-01A	Viscosity classes of engine oils (car engines)	Sheet 224.1 Passenger car engines (BR 100, BR 200, BR 600) CV engines from PC sector (BR 100, BR 200, BR 600) Industrial engines from the passenger car sector (BR 100, BR 200, BR 600)	
--------------------	--	--	--

**MODEL ALL**

Multigrade oils of the prescribed SAE grade can be used year round, taking the outside temperature into account. Before the onset of the cold season, refer to the adjacent temperature application table to ensure that the SAE grade you are using is sufficient for the temperatures that you will be encountering. The low-temperature properties of engine oils can be significantly worsened, for example by aging, soot and fuel insertion into the engine oil when in operation. An oil change before the cold season begins with an approved engine oil in the suitable SAE grade is therefore highly recommended.

**Temperature application table for MB passenger car/van major assemblies**
